Percentage, P & L Online Assignment 03

1. A real estate agent sells two sites for Rs. 22,500 each. On one he gains 20 % and the other he loses 20 %? What is his loss or gain percent?

1 4 % gain 2. 4 % loss 3. No profit no loss 4. 3% loss 5. 3% profit

2. If a retailer marks up his price by 20 % and then allows a 20 % discount, what is her percentage profit or loss?

1. 4 % gain 2. 1 % gain 3. 1% loss 4. 4 % loss 5. 2% loss

3. A radio dealer sells one radio set for Rs. 495 at a profit of 10 percent and sells another set for the same price at a loss of 10 percent. Find the cost price of the costlier set.

1. Rs. 550 2. Rs. 450 3. Rs. 850 4. Rs. 500 5. Rs. 575

4. By selling a box of floppy discs at Rs. 250, a dealer makes 5/4th the profit he makes by selling the same at Rs. 240. What is the cost of a box of floppy discs?

1. Rs. 175 2. Rs. 200 3. Rs. 400 4. Rs. 150 5. Rs. 230

5. What is the cost price of an alkaline battery, if the profit made by selling 60 of them each at Rs. 30, a dealer makes a profit equivalent to the cost of 15 of them?

1. Rs. 12 2. Rs. 36 3. Rs. 20 4. Rs. 25 5. Rs. 24

6. By selling an article for Rs 400 more, Karthik would have made 4 % profit on his sale instead of a 12 % loss. What was his cost price?

1. Rs. 2,500 2. Rs. 3,000 3. Rs. 1,250 4. Rs. 5,000 5. Rs. 3750

7. A tradesman marks his goods 20 percent above the cost price and allows his customers 10 % reduction on their bills. What percent profit does he make?

1. 16 % 2. 8 % 3. 10 % 4. 12.5 % 5. 12%

8. A milkman buys some milk contained in 10 vessels of equal size. If he sells his milk at Rs. 5 a litre, he loses Rs. 200; while selling it at Rs. 6 a litre, he would gain Rs. 150 on the whole. Find the number of litres contained in each cask.

1. 35 2. 350 3. 70 4. 17.50 5. 90

9. A manufacturer sells a car to a dealer at a profit of 25 %. The dealer sells it to a customer at a profit of 20 %. If the customer paid Rs. 120,000, find the cost to the manufacturer of the car.

1. Rs. 75,000 2. Rs. 70,000 3. Rs. 60,000 4 Rs. 50,000 5. Rs. 80000

10. A man purchases two watches at Rs 560. He sells one at 15 % profit and the other at a 10 % loss. Then he neither gains nor loses. Find the cost price of each watch.

1. 224, 336 2. 200, 300 3. 324, 236 4. 345, 165 5. 245, 255

Answer key & Explanations

Percentage, P & L Assignment 03		
1.	2	SP of 2 sites = 22500 each. $\therefore$ Total SP = 22500 × 2 = 45000. When two articles are sold at the same price and in one transaction there is a profit of R% and in the other transaction, there is a loss of R%, then in such cases there is a net loss of R^2/100%. Common loss% = $\frac{x^2}{100} = \frac{400}{100} = 4\%$.
2.	4	Net loss = $\frac{x^2}{100}\% = \frac{400}{100} = 4\%$.
3.	1	Net loss = 1.1 × 0.9 = 0.99 i.e. 1%. Total SP = 495 × 2 = 990 $\therefore$ CP = 990 × $\frac{100}{99}$ = 1000. CP of 1st = 495 × $\frac{100}{110} = 450$ and CP of 2nd = 495 × $\frac{100}{90} = 550$.
4.	2	Let cost of floppy disc = x. SP = 250 $\therefore 250 - x = \frac{5}{4}(240 - x) \Rightarrow x = 200$.
5.	5	Let the CP of alkaline battery = x. SP of 60 batteries = 30 × 60 = 1800. Profit = 15x. CP of 60 batteries = 60x $\therefore (60 \times 30) - 15x = 60x \Rightarrow x = 24$.
6.	1	CP = (Difference in SP) ÷ (% Difference in profit) = $\frac{400}{4-(-12)} \times 100 = \frac{400}{16} \times 100 = 2500$.
7.	2	Percent profit = 1.2 × 0.9 = 1.08 $\Rightarrow$ 8% or Take CP = 100, then MP = 120 $\therefore$ SP = $\frac{90}{100} \times 120 \Rightarrow$ SP = 108 $\therefore$ profit = 8%.
8.	1	If SP of milk per litre = 5, then loss = 200. If SP of milk per litre = 6, then gain = 150. So increase of SP by 1 Rs. per litre. There is total difference of Rs. 350 $\Rightarrow$ he has purchased a total quantity of 350 litres. There are 10 vessels $\therefore$ Number of litres in each vessel = 35.
9.	5	Cost of manufacturer = $120000 \times \frac{100}{125} \times \frac{100}{120} = 80000$.
10.	1	CP of 2 watches = 560. Let CP of 1st is x and CP of 2nd is 500 – x $\therefore (x \times \frac{115}{100}) + (560 - x)\frac{90}{100} = 560$ $\Rightarrow x = 224$ $\therefore$ CP of 2nd = 560 – 224 = 336.
