Percentage, P & L Online Assignment 04

1. In order to maintain the price line, a trader allows a discount of 10 % on the marked price of goods in his ship. However, he still makes a gross profit of 17 % on the cost price. Find the profit percent he would have made on the selling price had he sold at the marked price.

1. 23.07 % 2. 30 % 3. 21.21 % 4. 25 %

2. Advani bought an article and sold it to Chainani at a profit of 20 %. Chainani in turn sold it to Gidwani at a loss of 12 ½ %. What percentage would Advani have gained or lost if he had sold it directly to Gidwani at the same price as Gidwani actually paid to Chainani?

1. 10 % gain 2. 5 % gain 3. 5 % loss 4. None of these

3. Ashok bought an article and spent Rs. 110 on its repairs. He then sold it to Bhushan at a profit of 20 %. Bhushan sold it to Charan at a loss of 10 %. Charan finally sold it for Rs. 1,188 at a profit of 10 %. How much did Ashok pay for the article?

1. Rs. 890 2. Rs. 1,000 3. Rs. 780 4. Rs. 840

4. A tradesman marks an article at Rs. 205 more than the cost price. He allows as discount of 10 % on the marked price. Find the profit percent if the cost price is Rs. x.

1. $\frac{\frac{x}{18450}-10}{x}$ 2. $\frac{18450-10x}{x}$ 3. $\frac{\frac{x}{18450}-100}{x}$ 4. $\frac{\frac{18450}{x}-100}{x}$

5. Kaushik goes to a shop to purchase a doll priced at Rs. 400. She is offered 4 discount options by the shopkeeper. Which of these options should she opt for to gain maximum advantage of the discount offered.

1. Single discount of 30 % 2. 2 successive discounts of 15 % each
3. 2 successive discounts of 20 % and 10 % 4. 2 successive discounts of 18 % and 12 %

6. Kerishan bought 100 kg of rice for Rs. 1,100 and sold it at a loss of as much money as he received for 20 kg rice. At which price did he sell the rice?

1. Rs. 9 per kg 2. Rs. 9.17 per kg 3. Rs. 9.5 per kg 4. Rs. 10.33 per kg

7. After selling a watch, Shyam found that he had made a loss of 10 %. He also found that had he sold it for Rs. 27 more, he would have made a profit of 5 %. The actual initial loss was what percentage of the profit earned, had he sold the watch for a 5 % profit?

1. 64 % 2. 150 % 3. 200 % 4. 180 %

8. The profit earned when an article is sold for Rs. 800 is 20 times the loss incurred when it is sold for Rs. 275. At what price should the article be sold if it is desired to make a profit of 25 %?

1. Rs. 300 2. Rs. 350 3. Rs. 375 4. Rs. 400

9. An orange vendor makes a profit of 20 % by selling oranges at a certain price. If he charges Rs. 1.2 higher per orange he would gain 40 %. Find the original price at which he sold an orange.

1. Rs. 5 2. Rs. 4.8 3. Rs. 6 4. None of these

10. A retail showroom owner sells a pair of jeans for Rs. Z. A customer walks in and buys the jeans after being given a discount of 20 %. The showroom owner takes a stall at an exhibition and marks the same jeans for Rs. 2 Z. At the exhibition, the same customer comes and wants to buy the same jeans for his friend. Now the shopkeeper should reduce his marked price by how much to sell it at the same price as he has sold earlier?

1. 60 %
2. 50 %
3. 70 %
4. 80 %

Answer key & Explanations

Percentage, P & L Assignment 04		
1.	2	Let CP = 100. SP = 117. This is after a discount of 10%, thus the marked price must be 117/0.9 = 130. Thus he is marking the product 30% above the cost price.
2.	2	Net % gain or loss to Advani = 1.2 × 0.875 = 1.05 ⇒ Net gain of 5%.
3.	1	Charan's CP = 1188/1.1 = Rs. 1080. This is Bhushan's selling price at a loss of 10%. Thus CP of Bhushan is 1080/0.9 = Rs. 1200. This must be the SP of Ashok, who has sold it at a profit of 20%, his CP will be 1200/1.2 = Rs. 1000. This becomes his total cost after spending Rs. 110 on its repair, its original cost will be 1000 – 110 = Rs. 890.
4.	2	If CP = x, then marked price = x + 205 and Selling price = 0.9x + 184.5. Profit = 184.5 – 0.1x. The profit percent will be $\frac{184.5-0.1x}{x}\times 100$.
5.	1	As in all the cases the total happens to be 30 % only, wherever you get a value closest to 30 %, that discount option is the best from the customer point of view. Thus first option is the answer.
6.	2	Let the SP per kg. Be Rs. X. Total sales 100x, total loss will be 20x (i.e. the selling price of 20 kg.). Cost = Rs. 1100. Now Sales + Loss = Cost Price → 100x + 20x = 1100 → 120x = 1100 → x = 1100/120 = Rs. 9.1666.
7.	3	As profit and loss are calculated of the same figure i.e. the cost price. Hence you can straightaway find 10% is what percent of 5% i.e. 100 × 10/5 = 200%.
8.	3	If L represents the loss, then 20 L represents the profit and the sum of the two is difference of the two selling prices. Hence L = $\frac{525}{21}$ = 25. Hence, CP = 300, The SP to have 25% profit is 300 × 1.25 = Rs. 375.
9.	4	Rs. 1.2 is 20% of the cost price of an orange. I.e. the CP of one orange is 1.2/0.20 = Rs. 6. The SP per orange in the first case is 6 × 1.2 = Rs. 7.20. Hence None of these.
10.	1	Let the original markup be 100, he gives 20% off means he sells it for Rs. 80. The marked price at the exhibition is 200, in order to sell it for Rs. 80, it is to be given a discount of Rs. 120, which will be 100 × 120/200 = 60 %.
